### **Problem Statement:**

Nowadays, almost every household has a pet. Even though we say they are a part of the family, we are not able to provide our pets with everything they would need. Pet owners who are not able to care for their pets due to their busy work lives often leave their pets neglected.

Currently, there are many problems faced by pet owners like not finding good and trusted pet products in one place, a trusted place to sell and buy pets, a place to find a caretaker for their pet while they are away, a place where one can book a ticket (train, flight, etc.) for their pet, somewhere to book veterinary appointments and somewhere to find vlogs and information about their pets.

### **Background of Problem and Motivation:**

We all know that due to modernization and the effect of western culture, many people in India have started to keep pets and are becoming pet lovers. But we don't have as many pet shops in India, leave alone online shops.

It gets very difficult for people to buy the pet they want. Sometimes people need someone to take care of their pets when they go somewhere. They cannot find the right and reliable products for their pets, veterinarians for their pets, and flight and train tickets for them as well.

Having seen people in search of a place where they can get everything done for their pets and feeling the need for a platform that solves the problems of people with pets was our motivation to choose this topic for our HCI project.

## **Aspects that our Solution will cover/ The Scope of our Project:**

We are going to make an application that provides its users an efficient and easy way to connect with a variety of pet sellers and pet buyers across the world.

Along with the facilities for buying and selling pets, the application also provides users a service where they can book a caretaker for their pets whenever they need it.

People can also book appointments with veterinarians for pets along with 24×7 emergency medical services, and pet trainers according to their needs. Users can also order food, cosmetics, and clothes for their pets easily with minimal effort from anywhere. So that people with less access to these products can also provide good quality products to their pets.

Some part of the profit from our application will be used as a donation towards the welfare of street animals and abandoned pets.

## **Contributions:**

Topic research and problem statement:- Abhishek Beniwal and Adarsh Jha

Background of problem and motivation:- Abhishek Bansal

Aspects that our Solution will cover/ The Scope of our Project:- Abhishek Jha

Final compilation:- Aditi Sharma
